RFP

VibeShelf

Passion

I love books because it feels like I'm in another world, experiencing a different story.

Problem

I am a mood reader, so my book is usually based upon the current mood I am in, and sometimes, when you have a lot of books, it gets a bit overwhelming when deciding what to read next. Often, I end up not choosing anything due to the hard decision. Sometimes I wish I could just have someone else choose the book for me. This app will be targeted towards those who feel the same way, or just in general love books just as much as I do.

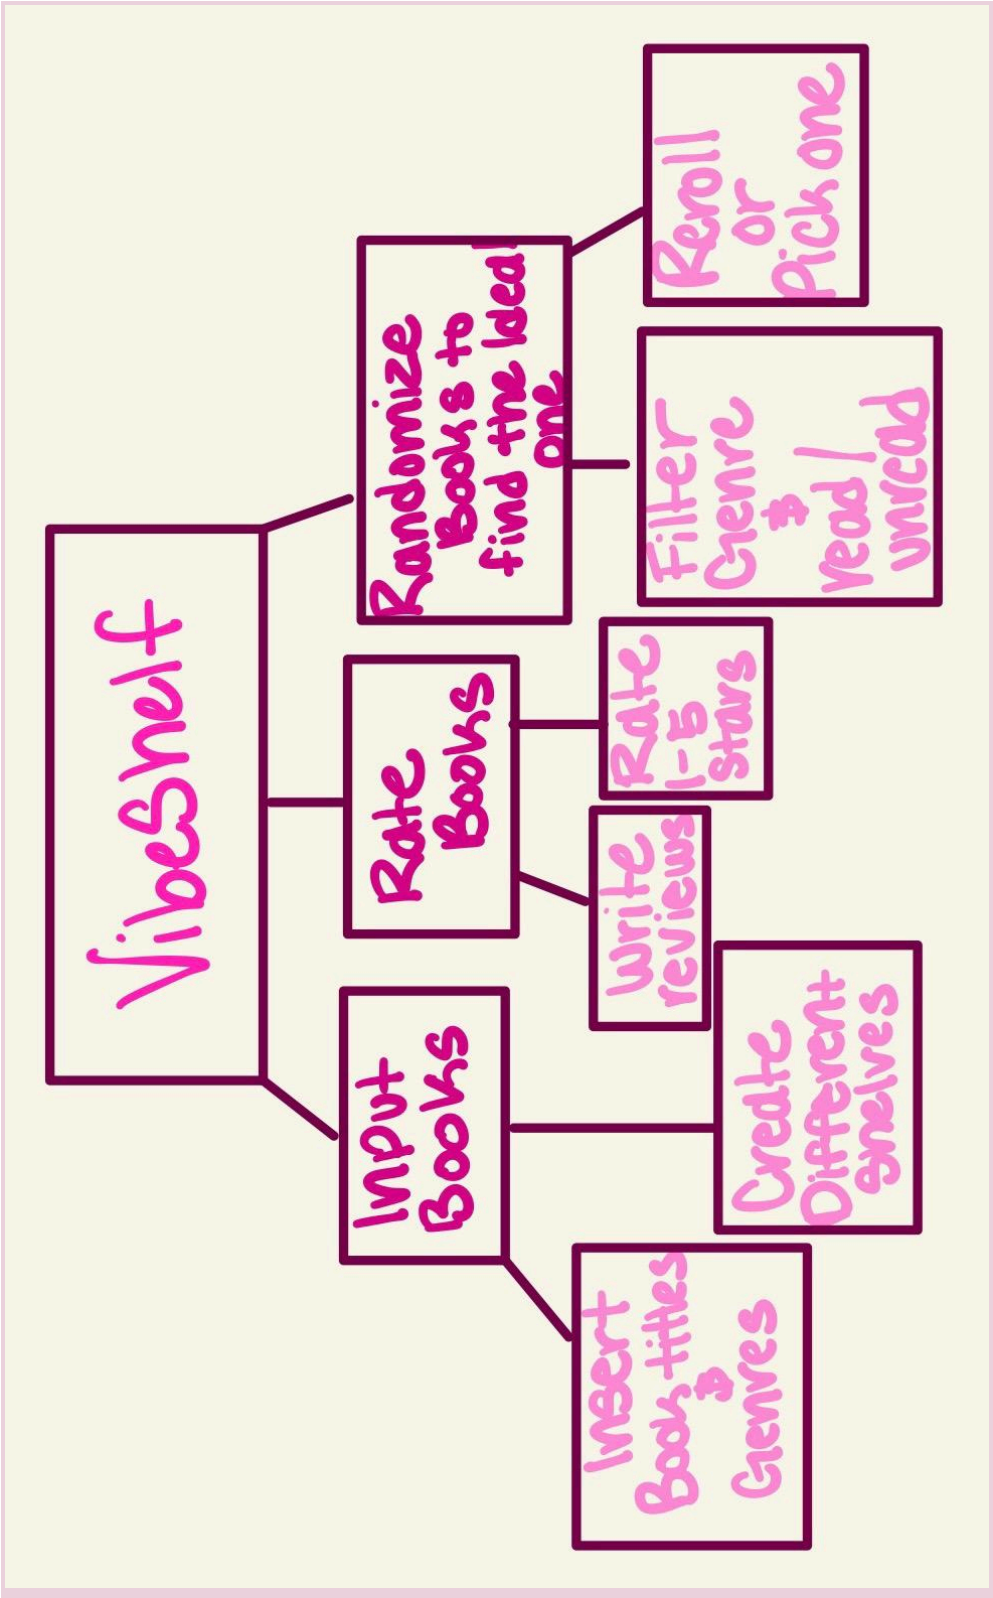
Purpose

The primary purpose of VibeShelf is to eliminate the indecision and use filtering to choose the desired specifications in order for the system to choose your perfect book based on your mood at the time. It will also allow you to create and add your own books from your personal shelves to maintain an organized list and count of all your personal books.

Differentiation

This app is similar to a few apps, such as “Goodreads” or “Libib.” Good Reads is similar to the shelf and rating aspect that VibeShelf will have. While Libib will be similar to the books inventory element. VibeShelf will be combining these popular elements from these apps to have it all in one.

Mind Map



VibeShelf
Randomize Books to find the ideal one
Reroll or Pick one
Filter Genre & read / unread
Rate Books
Rate 1-5 stars
Write reviews
Input Books
Create Different shelves
Insert Books titles & Genres

Personas

Eric, a Professor who loves reading and wants to expand his education.

As a Professor, I want to read educational books, so I can apply the new knowledge to teach students.

Goals

- To get through all the unread books in his bookshelf.
- To read reviews on books before buying them.

Samantha, a stay-at-home mother, loves to read, but never knows what to read.

As a stay-at-home mother, I want to find my perfect book, so that I always know what to read.

<u>Goals</u>

- To break through the indecisiveness of choosing a book.
- To read more and fill her spare time with books.
